Solution Architecture

You've decided AI is part of your future. Now you want an architecture you can stand behind — one you (or any qualified team) can execute. We design the foundation. You control who builds it.

INVESTMENT
from **$12,000** USD

3–4 week engagement
Scope confirmed after a 30-min fit call

WHAT WE DO

Architecture and roadmap

- Map your business workflows to an agentic system design
- Recommend models, tools, and integrations — with rationale
- Define data flow, security boundaries, and ownership
- Build a phased implementation roadmap with dependencies
- Identify the team and skills required to execute

WHAT YOU GET

A portable foundation

- Complete architecture document — diagrams, decisions, trade-offs
- Implementation roadmap any qualified team can execute
- Risk register with mitigation strategies
- Cost and timeline estimates per phase
- Optional: Visgo executes the plan (see Build)

WHY IT MATTERS

Portable. Vendor-neutral.

- A plan you own — not locked to a single provider
- Reduces execution risk before you commit major budget
- Lets you compare build proposals on a level playing field
- Built on the same agentic framework Visgo uses internally

ENGAGEMENT

How it works

- Kick-off and scoping call to confirm fit
- Working sessions with your team — technical and operational
- Architecture drafted, reviewed, iterated
- Final document and walkthrough — your team owns it

BUILT FOR

Teams committed to AI — who want a foundation, not a black box.

You've moved past "should we?" and into "how should we?" You want an architecture document you can show to your board, your tech team, or your future vendors — one that explains the choices, the trade-offs, and the path forward. Plan is a standalone engagement: keep the architecture, hire anyone to build it. Or hire us.
